LMR+LTE: Achieving the Broadband Future Today

APCO International
Leaders in Public Safety Communications®

Enhanced Situational Awareness

Observation and Tactical integration to allow for continuous real-time updates of events. When seconds matter without the need to use multiple systems. Complete integration into a web based platform deployable on any PC, Tablet or Smart Device utilizing role based access.

Unified Communications

Mission Critical Push To Talk, Mission Critical Video and Data communications all available at the point of need.
Simplistic user interfaces enables a user of any technical background to excel at the efficiencies gained while utilizing the latest applications and tech.
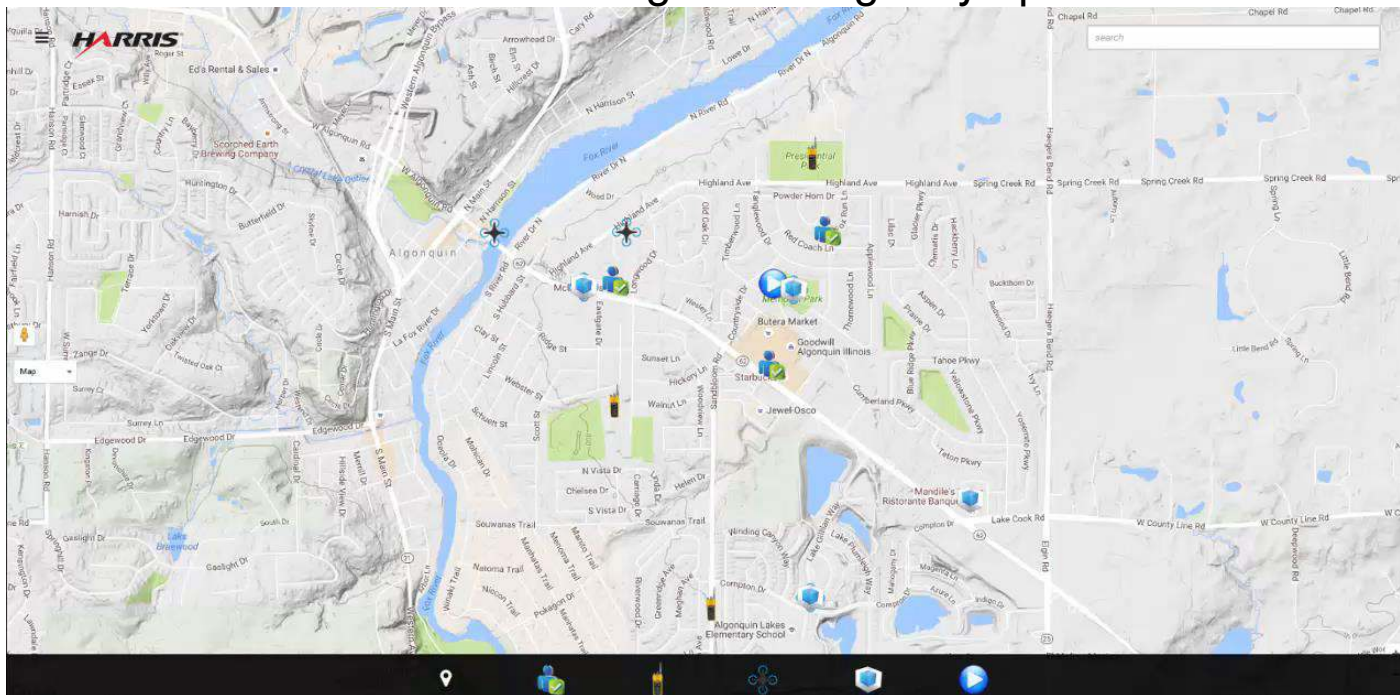

Visualized Analytics

Decades of existing data continuously refined to provide the highest level of awareness to operations being performed at this minute.
Search and Query algorithms provide the critical contextual data pertaining to the mission at hand.

Actionable Intelligence

Command and Control operations have never been more productive. Providing contextual updates along with recommendations for action to be taken defined by the agencies specific work flows and standard operating procedures. Decisions become faster by utilizing all the pillars of information available.

Organize the Chaos. Broadband networks will unleash a new level of data collection. What is critical and What is noise? Organized agency specific views.

Mission Critical Push To Talk, Mission Critical Video and Mission Critical Data all play key parts to capture and disseminate information to the edge and across multiple response agencies.

HIP
The End-To-End Solution

> Transform volumes of data into decisions by using the information you've already invest in.

> Facilitates info sharing across a diverse agency, from the command center to the tactical edge.

> Scalable architecture to meet the ever-changing needs of your agency

> Analyzing decades of agency data and repurposing it to work alongside the new data to uncover new intel.
