

FirstNetTM

FirstNet's Edge

*APCO Emerging Technology Forum
Raleigh, North Carolina*

February 28, 2017

*This version of the deck has poll results and graphs
from the interactive polling at the event.*

Bill Schrier

- **Senior Adviser, FirstNet**
- **Former Chief Information Officer, Seattle Police**
- **Former State Point of Contact (SPOC) for the State of Washington**
- **Former Chief Technology Officer, City of Seattle**

First of All The Legal Stuff ...

**I'm not going to talk about
the procurement and will
not take any questions about
the procurement.**

The services, applications and capabilities discussed in this presentation are under consideration by FirstNet as capabilities to be offered in the future Nationwide Public Safety Broadband Network (NPSBN). However, the presence of these capabilities in this presentation is not an indication that FirstNet will offer them or will offer them in the manner described.

Instructions for using Poll Everywhere and the cards on your chairs

Overall results from 8 interactive questions during this presentation:

Poll Question 1:

What is your job function (text just the letter)?

Response options

A = 911
B = Consultant
C = First Responder Agency, incl. EM
D = Government
E = Vendor
F = Other

Count	Percentage
38	48%
7	9%
8	10%
12	15%
11	14%
4	5%

Seattle police have 'embraced' crisis-intervention training, report says

Originally published August 17, 2016 at 10:04 pm | Updated August 18, 2016 at 5:59 pm

How do Public Safety Agencies view their current service providers?

"BETTER"

50% believe they're getting special Public Safety network features from Commercial carrier.

ENTRENCHED

Nearly all agencies have existing relationships with each carrier.

MOBILE CENTRIC

40% said their carrier has exceptional technical expertise.

KNOWLEDGE

Majority say their carrier has government selling expertise.

CUSTOM

Thought Leader Agencies are getting custom solutions from carriers.

PREDATORY

Carriers offer discounts to anyone in Public Safety.

LEGACY

Vast majority have been with Existing carrier for more than 5 years.

PRICE-CENTRIC

75% say that price is the number one factor that would prevent them from switching to any carrier.

Question for Today:

Given this competitive landscape, what unique capabilities should FirstNet implement to improve first responder safety and the safety and quality of life of 340 million Americans?

Minimum Capabilities

- Coverage
- Reliability – 99.99%
- Electronic Mail and Contact Lists
- Messaging – SMS, MMS and more
- Voice/Video telephony
- Push-to-talk, non-mission critical
- Device management
- Location and Presence
- Device authentication and encryption
- Standard apps and features: cameras, maps, video calls
- And more ...

QPP: Quality of Service, Priority, Preemption

- **Quality of service** – The overall performance of a telephony or data network, particularly as seen by the users of the network
- **Priority** – A network capability that enables a user's application or usage of the network to take precedence over another user's application or usage of the network.
- **Preemption** – A network capability that permits authorized high priority traffic, e.g., coming from public safety or first responders, to take over resources assigned to lower priority traffic, e.g., private traffic.
- **Local Control** – through roles or APIs to, say, CAD

Poll Question 2:

In your experience, how important is priority, pre-emption and QoS to a public safety agency making a decision about a wireless service provider?

Response options

0 = Not important at all

1 = Of minor interest

2 = a factor

3 = a significant factor

4 = very important

5 = vital, a game changer

Smart Cities – Smart Public Safety

INTERNET OF THINGS IN CONNECTED CITIES

TRANSPORTATION CONGESTION SENSORS

Smart transportation systems use sensors to detect congestion and bottlenecks in traffic patterns. They also rely on cameras to enforce speed and traffic infractions. In doing so, these tools gather real time information that can be used by city DOTs to make mobility networks safer and more efficient.

WATER AND WASTEWATER MONITORING

Monitoring devices can detect leaks as well as changes in water pressure to determine whether water infrastructure is working properly.

PARKING APPS AND KIOSKS

Apps coordinate with smart parking meters to inform drivers of where there is parking availability.

BRIDGE INSPECTION SYSTEMS

Sensors monitor the structural soundness of bridges and inform city engineers of any issues. Drones are used to inspect hard to reach areas.

SELF-DRIVING CARS

Self-driving cars shuttle people in and out of the city, providing rides for others and making deliveries while their owners are occupied with work or other activities.

WASTE MANAGEMENT SENSORS

Sensors detect the amount of garbage in receptacles around the city so that sanitation workers can maximize efficiency in their routes.

LIGHTING

LED lights are weather adaptive and communications are automatically sent to the Department of Public Works when the bulbs need to be changed.

FIRE DETECTION

Sensors monitor conditions in public parks and wooded areas that might be prone to fire. Sensors can also detect fires in buildings and initiate a call to the fire department in an emergency.

ENERGY MONITORING

Power plants can be monitored for safety and city officials can be informed of any influx in radiation levels.

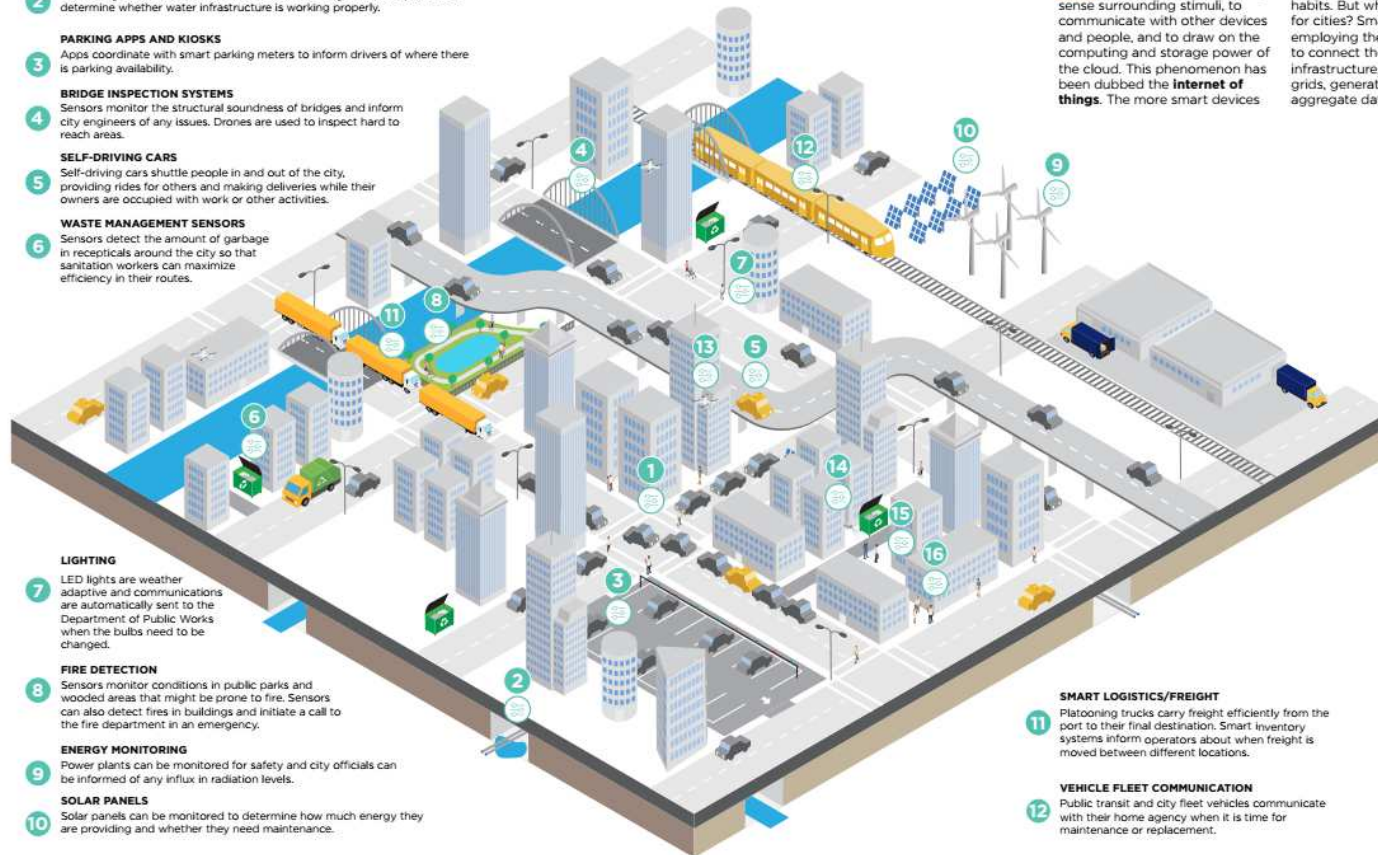

SOLAR PANELS

Solar panels can be monitored to determine how much energy they are providing and whether they need maintenance.

Every consumer product and piece of infrastructure increasingly has the ability to sense surrounding stimuli, to communicate with other devices and people, and to draw on the computing and storage power of the cloud. This phenomenon has been dubbed the **Internet of things**. The more smart devices

and sharing platforms there are, the more data is generated about consumer's preferences and habits. But what does this mean for cities? Smart cities are employing the same technology to connect their disparate utility, infrastructure, and public service grids, generating real-time aggregate data. This, in turn, can

help cities manage their programs and services more effectively and gauge their impact immediately. The city of the future is an interconnected one, where devices communicate with one another in a constant stream of data that provides real-time information to the public and to the municipality.

DRONES

Drones can be used for law enforcement and firefighting, as rural ambulances, for infrastructure inspections, and for environmental monitoring. Commercial uses include precision farming, aerial photography, and in the near future, package delivery.

SURVEILLANCE CAMERAS

Cameras ensure security by monitoring activity in areas that are not frequented by public safety officers. Areas that are not open to public access can be monitored to keep unauthorized personnel out.

BODY CAMERAS

Public safety officers can wear body cameras that capture footage of interactions between themselves and city residents to ensure safety for both parties.

WEARABLE DETECTION

Cities can build in smartphone and wearable detection sensors so that people can be an active part of the internet ecosystem, communicating with the city, and with each other.

BROADBAND INFRASTRUCTURE

A reliable internet ecosystem is the glue that holds the internet of things together.

Smart Cities

- Signals
- Cameras
- Parking spaces
- Street Sensors
- Bridges

Smart Street Lights:

- Wi-Fi
- Digital Signs
 - Sensors
 - Cameras
 - Speakers
 - Kiosks

- Buildings
- Alarms
- HVAC
- Video
- Utilities

Chicago Police Video

- Smart grid
- Electrical
- Water, Gas
- Wastewater

Poll Question 6:

In your experience, how important will support for smart cities, both sensor data collection and distribution of actionable information to responders, be to a government agency making a decision about a wireless service provider?

Response options
0 = Not important at all
1 = Of minor interest
2 = a factor
3 = a significant factor
4 = very important
5 = vital, a game changer

Public Safety Fought for FirstNet

Signing of the Legislation

FirstNet will Deliver

FirstNet by the Numbers

VISION

To provide emergency responders with the first nationwide, high-speed, wireless broadband network dedicated to public safety

THE LAW

2.22.12

FirstNet becomes Law
PL 112-96

FUNDING

\$7B

authorized to build the FirstNet Network. Funded by spectrum auctions through 2022. The first auction netted

\$1.6B

20MHz of bandwidth

has been dedicated to public safety in the prime **700MHz** frequency range.

GOVERNANCE

FirstNet Board of Directors' **15** members have backgrounds in police, fire, sheriff, emergency medical, city government, and commercial telecommunications.

Governor appoints **1** single Point of Contact and governing body to represent the state's interests to FirstNet.

40 member Public Safety Advisory Committee (PSAC) advises FirstNet on public safety intergovernmental matters.

WHO WILL USE FIRSTNET

Over 5 Million

potential FirstNet public safety users nationwide

3,800,000

Square Miles

60,000

Public Safety Agencies

3,250

Counties

566

Tribes

FirstNet must provide service in all **50** US states, **5** territories, and Washington, D.C.
