

Next Generation 9-1-1

Jay English
Director
Comm. Center & 9-1-1 Services
APCO International

Topics to Cover

- **NG9-1-1 – What it means may vary**
- **Technical Basics – New Terminology**
- **Issues that need to be on the radar**
- **Sensible decisions for your region**

How will NG9-1-1 Systems Be Different?

- **IP-Based: components/personnel can be located anywhere**
- **Many new communications inputs**
- **Standard interfaces will make it possible for disparate systems, PSAPs and authorized agencies to interoperate**

So...just what is “NG9-1-1?”

- Public Safety Communications is undergoing tremendous change.
- The transition from circuit switched technology to IP networks and Next Generation 9-1-1 has begun, leaving PSAP's and Telecommunicators to wonder, “What is NG9-1-1 and what does it mean to me?”

So...just what is “NG9-1-1?”

- Next Generation systems will be a “network of networks” providing connectivity between PSAPs on a network within a specified geographic area to other networks both regionally and nationally.

STANDING UP A SECURE BROADBAND IP NETWORK AND INTERCONNECTING PSAPS AND OTHER AGENCIES

Agencies share resources such as CAD, RMS, email & Internet applications

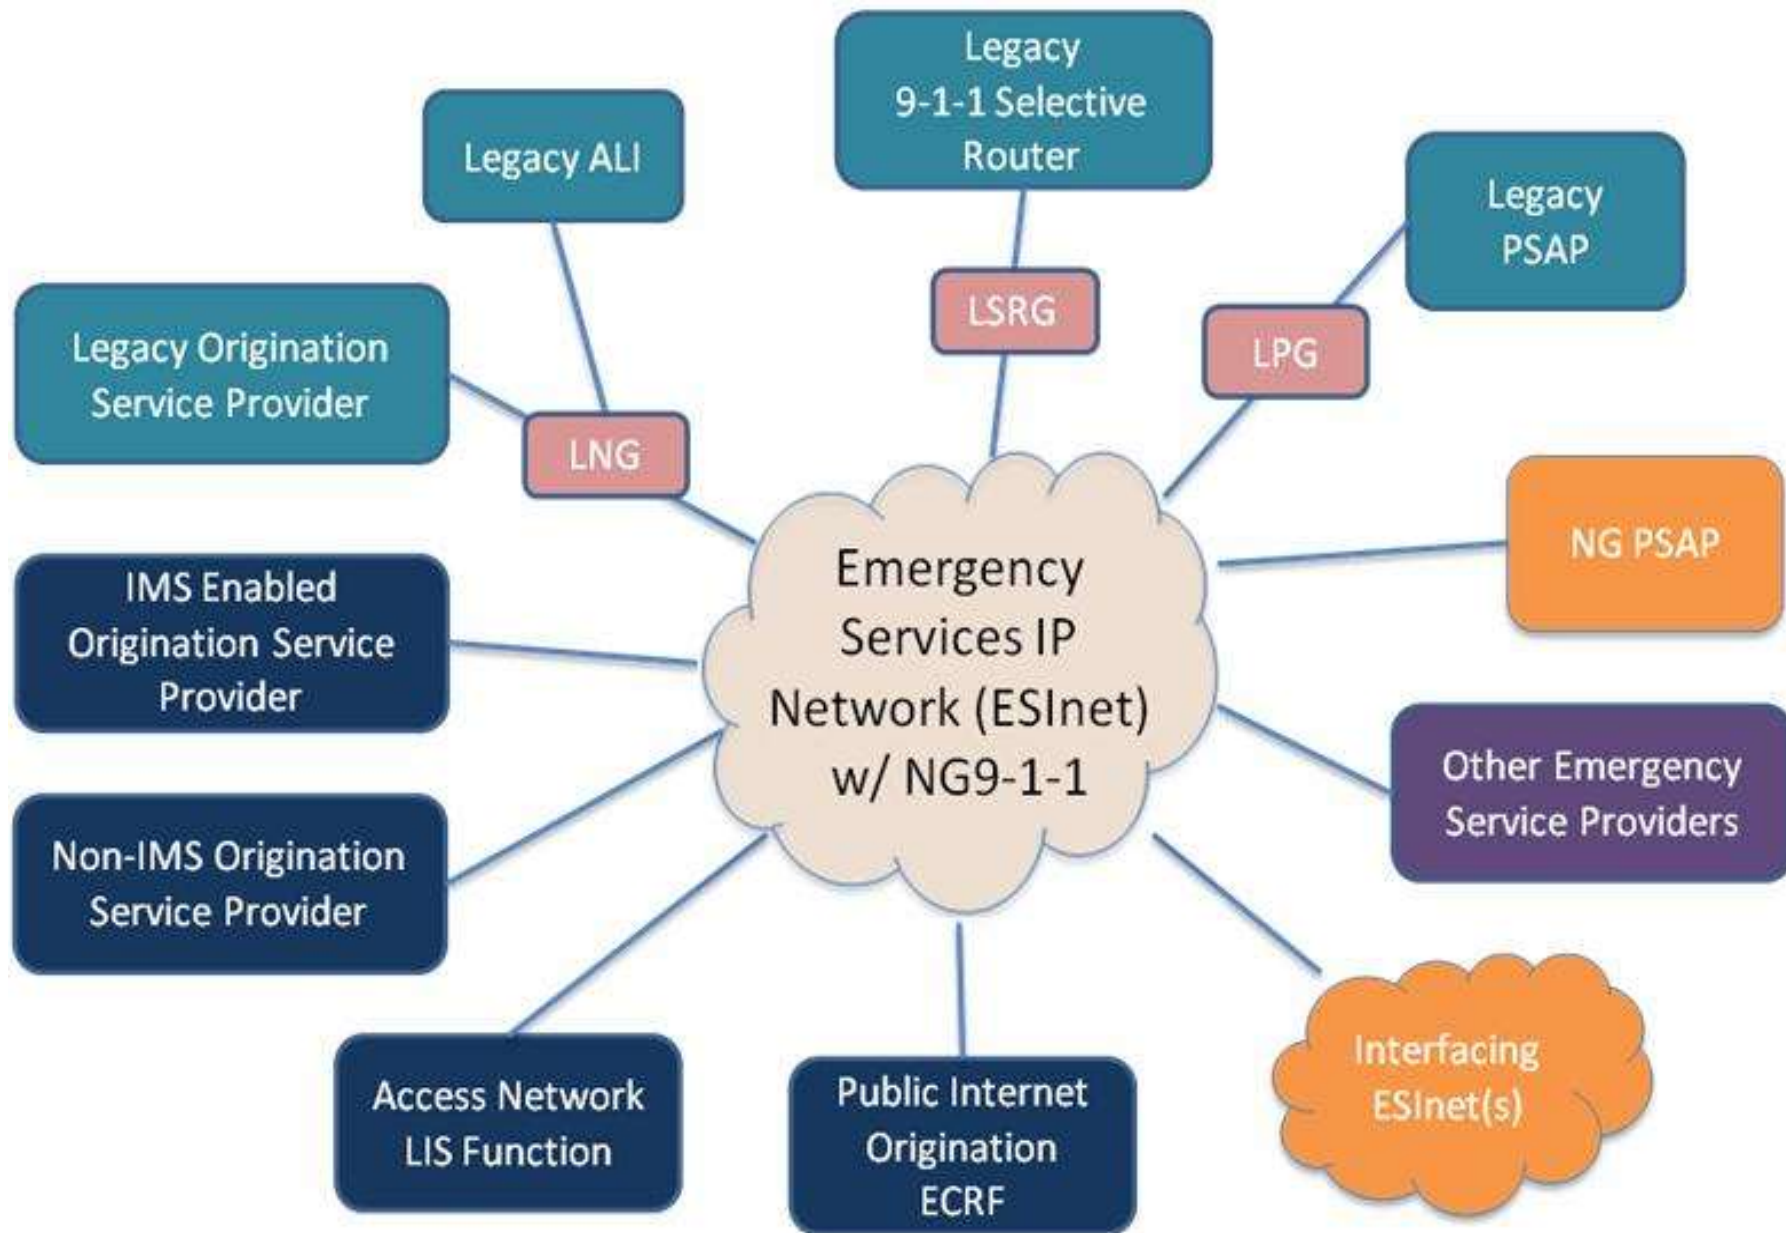

Building a Network

- ❖ Does your state currently operate a secure IP network that could be used for emergency services or for delivery of 9-1-1 calls?
- ❖ Have you assessed requirements for bandwidth to assure that the current network will handle future traffic?
- ❖ How will it be managed/governed in an environment with overlapping jurisdictions?

*What Is **i3** Next Gen 9-1-1*

- **i3 is the NENA architecture for a system of 9-1-1 services, functional elements and databases that run on an Emergency Service IP Network (ESInet).**
- **9-1-1 calls will be routed via geospatial databases.**
- **ATIS is also working on an IMS based Architecture for ESInets.**
- **Eventually, these will replace E9-1-1 capabilities while retaining the functions in place today.**

ESInets

- Fundamental to the formation of NG systems is the creation and deployment of Emergency Services IP Networks, or ESInets.
- The ESInet is indeed a network of networks designed to achieve specific Quality of Service (QoS), Security and reliability levels while facilitating enhanced call routing and delivery.

ESInets

- In addition the ability to reroute calls to, and share data with, any PSAP served by the ESInet is a benefit of the transition.
- In spite of the measurable benefit to making the transition, many PSAPs are finding that they are limited by equipment and networks incapable of providing a realistic evolution to NG9-1-1.

NG9-1-1 Elements

Systems & Functionality

NG9-1-1 Systems are made up of Functional Elements (FE) that will provide multiple features & capabilities.

An FE does not have to correspond to a specific product or position in a PSAP.

NG9-1-1 Functional Element Examples

Dispatch	ECRF
Call Handling	ESRP
Mobile Data	BCF
Incident Creation	PRF
Logging & Recording	LVF
GIS	

Beware of legacy 9-1-1 terms that are limited to only one function

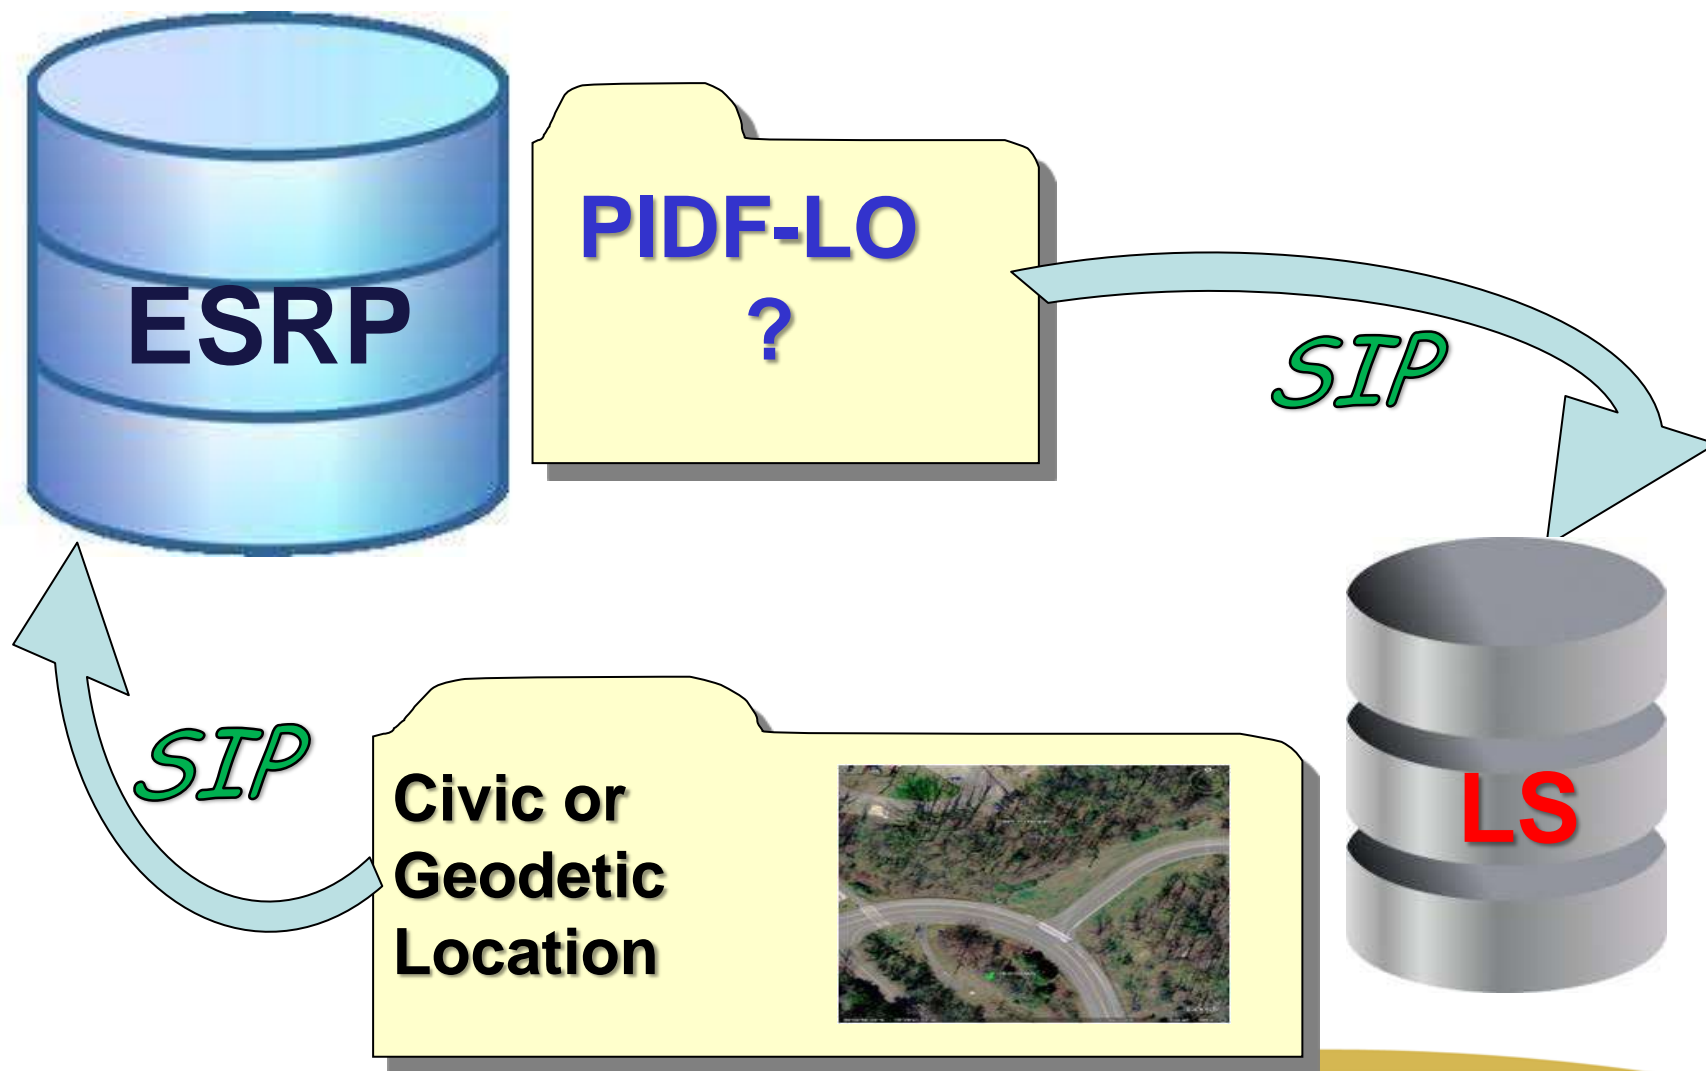

ESRP & PRF

Service Provider Stakeholders

Who are the origination & access network providers that will be involved?

Are they ready to move forward with NG9-1-1?

Governance Issues

Funding

System Management

**Who will be the designated 9-1-1
system manager?**

**At what levels will contracted vendors
be required?**

Project Management Basics

What is the Common Denominator During an Emergency?

ALL Emergencies are LOCAL.

Interoperability of both voice and data services is critical as incidents unfold and expand.

Next Generation services can provide that interoperability

Collaboration is Required

Managing data, coordinating services at all levels, and paying for them all require vision, leadership and a willingness to work collaboratively.

NG9-1-1 Transition

Evolution not Revolution
